

abrasion and friction as inner thighs and underarms. The emulsion yields approximately 30 applications

Cod.: UK14AS

ANTI-ABRASIVE EMULSION

Specific softening substances form a superficial lubricating film, persistent and transpiring that protects skin and prevents irritation and consequent inflammation caused by abrasion and rubbing forces. A particular fluorine-urate oil (PFPE) with exceptional film-gene and protective characteristics, combined with lenitive substances (bisabolol, pantenol and vitamin E) prevents sore reddening.

Indications: non occlusive formulation exclusively created for professional athletes, in particular podiatrists and cyclists who often present skin areas particularly subject to
