

AG-SHOCK WITH REMOVABLE INSERT

Heel pad technologically advanced silicone combination with ionized silver designed for shock absorption between foot and ground during walking or running, which features a drop shaped removable insert that increases the offloading on the heel in case of heel spur.

Dampens the vibrations that occur at each step, thus decreasing the transmission to the spine and knee and therefore contributing to the protection of the joints, relieving pain if existing or preventing from pain to appear.

Indications: preventions of tallonitis, relief from pain in presence of heel spurs and plantar fasciitis, during sport practice or daily living.
